

DURASEAL.

High-density
closed-cell spray foam

Duraseal must be covered with an appropriate membrane, such as Duraflex F46, which will protect the foam from water infiltration and UV rays.

Cutting-Edge Roofing Foam

EXCEPTIONAL INSULATION:

Duraseal creates a continuous and seamless layer, reducing air leaks and providing outstanding thermal insulation.

ENHANCED DURABILITY:

The closed-cell structure provides additional strength, making the roof more resistant to harsh weather conditions, impacts, and structural stresses.

SUPREME WATERPROOFING:

Duraseal forms a homogeneous barrier that protects the building from leaks and potential water damage.

INCREASED LONGEVITY:

Spray foam can extend the lifespan of a flat roof, thereby reducing the need for costly repairs and replacements.

ECO-CONSCIOUS CHOICE:

Insulation with spray foam helps reduce energy consumption, thus lowering the carbon footprint.
