Technical Bulletin #171

Subject: Boreal Nature Elite and Fibre Hybrid Assemblies

Foam/fibre hybrid assemblies are not referenced in the CAN/ULC S705.2 Installation Standard. The installation is considered more within the building science domain rather than the installation realm.

Genyk Polyurethane warrants the use of Boreal Elite, closed-cell spray foam insulation, when used in conjunction with other insulation products. With confidence based on significant experience, Boreal Nature Elite provides the design professional with the ability to include Boreal Elite's higher thermal resistance and air barrier qualities into hybrid wall assemblies.

The performance of Boreal Nature Elite will not be adversely affected by other insulation materials, and further, the use of a closed-cell insulation will actually improve the performance of fibrous and open cell insulation materials.

Please find a research paper prepared by RDH Laboratories on the Genyk website.
